Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on June 28, 2005 has been entered.

Claim Objections

Claims 2,3,15-19,24,25 are objected to because of the following informalities:

It is unclear as to whether the predetermined threshold set forth in claim 2 is the same threshold set forth in claim 6. In claim 3, line 2, "fieldcomprises" should be "field comprises". It is unclear as to what further structural limitations have been set forth in claim 15. The claim appears to be redundant in view of the limitations set forth in claim 19. Furthermore, the use of the term "typical" is questioned. In claim 19, "said implantable medical device" lacks antecedent basis. Claim 17 is confusing in that line 17 refers to an implantable medical device. Appropriate correction is required.

Claim Rejections - 35 USC § 112

Claims 15-19,24,25 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification only discloses means for detecting a magnetic field strength of .2 Tesla and above. Therefore, it is unclear as to what means is used to detect a field strength of lower than .17 Tesla.

Claims 2-6,15-21,24,25 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification, as originally filed,

fails to disclose that sensing of cardiac activity will not occur in the presence of "relatively low-energy electromagnetic interference". The specification, as originally filed fails to disclose any means for detecting a field strength of lower than .17 Tesla.

Allowable Subject Matter

Claims 8-13,22,23 are allowable over the prior art of record.

Response to Arguments

Applicant's arguments filed June 6, 2005 have been fully considered but they are not persuasive. As clearly seen in the preamble of claim 6, claim 6 sets forth that no sensing occurs when the interference signal is at a low level. The specification fails to disclose this limitation. The specification discloses that sensing still occurs in the presence of low level interference signals but switching does not occur.
